

# Measure with Curious George!

Curious George is using markers to measure his desk. Can you count the markers? How long is his desk?

## Here's a simple measuring activity to do with your child.

Find same-sized units (such as unsharpened pencils, crayons, markers, chalk) or measuring tools (such as rulers, yardsticks, and measuring tapes). Ask your child what he or she would like to measure. Look for everyday items around the house.

If you want, keep a chart of what you have measured. Talk about the length and height of things you find and use words such as *tall*, *taller*, *tallest* or *small*, *smaller*, *smallest*.

Happy measuring!
